## Meningococcal Outbreaks | CDC

◀ **Outbreak Definition**    Outbreak Control Measures    Vaccination    Pr    ▶

A meningococcal disease outbreak occurs when multiple cases of the same serogroup (type) happen in a population over a short time period. Outbreaks can occur in communities, schools, colleges, prisons, and other populations. Depending on the population size and specific circumstances, health officials may declare an outbreak after just two cases.
